

PHOTOGRAPHY PORTFOLIO WEBSITE WITH ONLINE BOOKING SYSTEM

PROJECT REPORT

ABSTRACT

The **Photography Portfolio Website with Online Booking System** is a web application developed to help photographers showcase their work professionally while providing customers with an easy and convenient way to book photography sessions online. The website includes a responsive portfolio gallery displaying portrait, nature, street, and content creation photography. Customers can explore the portfolio, learn about the photographer, submit booking requests, and contact the photographer through the website.

The project uses **HTML, CSS, and JavaScript** for the frontend, **Flask (Python)** for the backend, and **SQLite** as the database to store booking information. An administrator can securely log in to the dashboard to view, approve, or delete customer bookings. The system improves customer interaction, simplifies appointment management, and provides a modern online presence for photographers.

CHAPTER 1: INTRODUCTION

1.1 Introduction

Photography has become an important profession and creative industry where photographers require an online platform to display their work and attract clients. Traditional methods such as phone calls and social media messages often make appointment management difficult.

The Photography Portfolio Website provides a digital platform where photographers can showcase their work and customers can book photography services online. The project combines a professional portfolio with an online booking system, making communication easier and improving customer satisfaction.

1.2 Problem Statement

Many photographers rely on manual booking methods, resulting in missed inquiries, scheduling conflicts, and poor organization of customer information. There is a need for a centralized system that allows customers to submit booking requests while enabling photographers to manage appointments efficiently.

1.3 Objectives

The objectives of the project are:

- Develop a professional photography portfolio website.
 - Showcase portrait, nature, street, and content creation photography.
 - Allow customers to submit online booking requests.
 - Store booking details securely in a database.
 - Provide an administrator dashboard to manage bookings.
 - Create a responsive website accessible on desktop and mobile devices.
-

1.4 Scope

The project is intended for freelance photographers, photography studios, and content creators. It enables customers to browse photography collections and request bookings online while providing an administrator with booking management features.

CHAPTER 2: LITERATURE SURVEY

HTML

HTML (HyperText Markup Language) is the standard language used to create web pages. It defines the structure of a webpage by organizing content into headings, paragraphs, images, forms, and navigation menus.

CSS

CSS (Cascading Style Sheets) is used to design the appearance of web pages. It controls colors, fonts, layouts, animations, and responsive design, providing an attractive user interface.

JavaScript

JavaScript is used to create interactive web pages. It enables smooth scrolling, animations, navigation highlighting, form validation, and user interaction.

Flask

Flask is a lightweight Python web framework used to develop the backend of the application. It processes booking requests, manages routes, and communicates with the SQLite database.

SQLite

SQLite is a lightweight relational database management system used to store customer booking information. It does not require a separate database server and is ideal for small and medium-sized web applications.

CHAPTER 3: SYSTEM ANALYSIS

Existing System

Most photographers depend on manual booking through phone calls, emails, or social media messages. These methods make appointment tracking difficult and increase the possibility of missing customer requests.

Disadvantages

- Manual booking process
 - Poor organization of customer information
 - Difficult appointment management
 - Time-consuming communication
-

Proposed System

The proposed Photography Portfolio Website provides an online booking system integrated with a responsive portfolio. Customers can easily book photography sessions, and administrators can manage bookings through a dashboard.

Advantages

- Easy online booking
 - Secure database storage
 - Professional portfolio presentation
 - Responsive design
 - Efficient booking management
-

CHAPTER 4: SYSTEM DESIGN

System Architecture

Database Design

Table: bookings

Field	Description
id	Booking ID
name	Customer Name
email	Email Address
phone	Phone Number
service	Photography Service
booking_date	Booking Date
location	Location
message	Customer Requirements
status	Booking Status

CHAPTER 5: IMPLEMENTATION

Frontend

The frontend is developed using HTML, CSS, and JavaScript. It includes:

- Home Page
 - Portfolio Section
 - About Section
 - Booking Form
 - Contact Section
-

Backend

The backend is developed using Flask. It performs the following tasks:

- Receives booking requests
 - Stores data in SQLite
 - Displays bookings in the dashboard
 - Approves bookings
 - Deletes bookings
-

Admin Dashboard

The administrator can:

- View booking requests
 - Approve bookings
 - Delete bookings
 - Log out securely
-

CHAPTER 6: TESTING

Test Case	Expected Result	Status
Open Website	Homepage displays correctly	Pass
Portfolio Navigation	Correct section opens	Pass
Submit Booking Form	Booking stored in database	Pass

Test Case	Expected Result	Status
Admin Login	Dashboard opens	Pass
Approve Booking	Status updated	Pass
Delete Booking	Booking removed	Pass

RESULT

The Photography Portfolio Website with Online Booking System was successfully developed using HTML, CSS, JavaScript, Flask, and SQLite. Customers can browse photography collections, submit booking requests, and contact the photographer. Administrators can securely manage bookings through the dashboard.

CONCLUSION

The project successfully combines a professional photography portfolio with an online booking management system. It simplifies appointment scheduling, improves customer interaction, and provides photographers with an effective platform to promote their services. The website is responsive, user-friendly, and easy to maintain.

FUTURE ENHANCEMENTS

Future improvements include:

- Online payment gateway integration
 - Email confirmation for bookings
 - SMS notifications
 - Google Calendar synchronization
 - Multiple administrator accounts
 - Customer login system
 - Cloud database integration (MySQL/PostgreSQL)
 - Image upload from the admin dashboard
 - Booking analytics and reports
-

SOFTWARE REQUIREMENTS

- Operating System: Windows 10/11
- Programming Language: Python

- Frontend: HTML5, CSS3, JavaScript
 - Backend: Flask
 - Database: SQLite
 - IDE: Visual Studio Code
 - Web Browser: Google Chrome / Microsoft Edge
-

HARDWARE REQUIREMENTS

- Processor: Intel Core i3 or above
 - RAM: 4 GB or above
 - Storage: 500 MB free space
-
